THE VOLVO S80

The Volvo S80 supremely demonstrates our obsession for beautiful yet functional design. Equal parts executive express and family saloon, it can justifiably lay claim to being the perfectly balanced automobile. The information in this price list can help you find the right balance for your Volvo S80 – from the size of engine to the finishing touches.

T6

The T6 2.9 litre, twin turbocharged, in-line, 6 cylinder engine delivers outstanding performance – producing 272 bhp and 380 Nm torque. This extremely smooth engine features dual variable valve timing on both intake and exhaust sides and responsive twin turbochargers designed to deliver maximum torque from low and medium engine speeds. Effortless performance is combined with excellent fuel consumption and CO₂ emissions.

D5

The D5 2.4 litre, turbocharged, in-line, 5 cylinder common rail diesel engine delivers very low fuel consumption and CO₂ emissions with excellent performance – producing 163 bhp and 340 Nm torque. This extremely advanced diesel engine is made entirely of aluminium giving it a similar weight to a petrol engine. This advanced design combined with second generation electronic common rail fuel injection and the variable blade turbocharger make it one of the quietest and most advanced diesel engines available on the market.

BI-FUEL

As part of Volvo's total commitment to the environment, the S80 Bi-Fuel engines enable you to benefit from the lower cost of LPG/CNG and reduce harmful emissions to the atmosphere.

- (i) Liquefied Petroleum Gas.
- (ii) Compressed Natural Gas.
- (iii) These results do not express or imply any guarantee of the fuel consumption of a particular car as there are inevitable differences between individual cars of the same model. Additionally driving style, traffic conditions, as well as the age and mileage and standard of maintenance will affect a car's fuel consumption.
- (iv) The Urban fuel consumption figure is based on typical city driving, including starting the car from cold. The Extra Urban figure is based on typical motorway driving and cruising. The Combined figure averages the consumption across both cycles.
- (v) For best performance and lowest fuel consumption 98 RON is recommended. 95 RON can be used for normal driving.
- (vi) Unbraked towing weight must not exceed 50% of kerb weight up to a maximum of 750 kg.
- (vii) Figure quoted without sunroof.
- (viii) 2.9 and T6 only available with Geartronic.

Notes
The weight of the vehicle will influence the level of CO₂ emitted. As a result, vehicles with higher levels of specification and factory fit options may emit higher levels of CO₂. Once a vehicle has been built it will be given its own specific CO₂ emission on which Vehicle Excise Duty will be charged.
A weighbridge must be used to determine specific weights.
