Effortless performance is combined with excellent fuel consumption and CO<sub>2</sub> emissions.

## D5

The D5 2.4 litre, turbocharged, in-line, 5 cylinder common rail diesel engine delivers very low fuel consumption and CO<sub>2</sub> emissions with excellent performance – producing 163 bhp and 340 Nm torque. This extremely advanced diesel engine is made entirely of aluminium giving it a similar weight to a petrol engine. This advanced design combined with second generation electronic common rail fuel injection and the variable blade turbocharger make it one of the quietest and most advanced diesel engines available on the market.

- (i) These results do not express or imply any guarantee of the fuel consumption of a particular car as there are inevitable differences between individual cars of the same model. Additionally driving style, traffic conditions, as well as the age and mileage and standard of maintenance will affect a car's fuel consumption.
- (ii) The Urban fuel consumption figure is based on typical city driving, including starting the car from cold. The Extra Urban figure is based on typical motorway driving and cruising. The Combined figure averages the consumption across both cycles.
- (iii) For best performance and lowest fuel consumption 98 RON is recommended. 95 RON can be used for normal driving.
- (iv) Unbraked towing weight must not exceed 50% of kerb weight up to a maximum of 750 kg.
- (v) Figure quoted without sunroof.

**Notes**  
The weight of the vehicle will influence the level of CO<sub>2</sub> emitted. As a result, vehicles with higher levels of specification and factory fit options may emit higher levels of CO<sub>2</sub>. Once a vehicle has been built it will be given its own specific CO<sub>2</sub> emission on which Vehicle Excise Duty will be charged. A weighbridge must be used to determine specific weights. Data valid for manual transmission unless specified. All measurements in mm.
