## AUTORADIO AND CASSETTEN-AUTORADIO

Installation kit:	7 608 3600 10
Suppression kit 142/144/145	7 609 951 2
164	7 609 952 2
Type of antenna:	V 10 EU
Part no.:	7 691 200 141

VKD-Nr. 373.21.541.40 (Erst)

# VOLVO

142/144  
145/164

from 8.72

Before installation check car radio with antenna and speaker.

### PREASSEMBLY

Mount components marked with double circled numbers in fig. 2 to receiver before installation in car. Components marked with single circled numbers are required for the actual installation.

### ANTENNA INSTALLATION

The antenna is installed on the RH side, seen in drive direction.

Drill antenna hole according to measurements given in fig. 1 and drilling template supplied in antenna carton.

First check measurements!

Remove undercoating from underside of antenna hole and apply graphite grease to ensure good ground contact!

Insert antenna, line up and secure with cap nut.

Drill 11.5 mm hole for antenna cable in the kick panel and route antenna cable to the interior of car.

Slide rubber grommet on antenna cable and insert in hole.

Pass antenna cable to car radio installation place.

### DISMOUNTING

Unscrew cover of tunnel console. (4 lateral screws, 2 inferior screws.)

Remove cable plug and take off cover.

Unscrew cover before car radio cutout. (Keep screws).

Remove speaker cover provided, break off bracket and pierce the holes.

Remove protection cardboard.

### SPEAKER INSTALLATION

Attach locking nuts to speaker.

Connect speaker cable at speaker.

Route speaker behind dashboard and hold it under speaker cutout.

Attach speaker cover. Fix speaker cover and speaker with 4 lens head self-tapping screws.

### CAR RADIO INSTALLATION

Screw loosely rear mounting bracket to car radio premounted.

Lift rubber board in the console.

Insert premounted car radio from the front and fix it with the four lens head self-tapping screws provided.

Straighten support and drill a hole (3,5 mm) on either side of the gear tunnel according to the support. Fix support.

Connect supply lead with forked plug connector at ventilator switch (yellow cable).

Connect antenna and speaker cable at car radio.

### ASSEMBLY

Connect cable plug to cover.

Fix cover of tunnel console.

### RF UNIT MOUNTING

In case of cassette car radios mount the RF unit to a suitable place of the firewall.

### ANTENNA MATCHING

Connect battery, extend antenna completely, switch on set and adjust maximum volume.

Tune in a weak AM station at about 600 kHz.

Adjust antenna trimmer to maximum volume with a screw driver which is inserted through a hole to the right of the dial.

### EXAMINATION

With engine running, check performance of set on all wavebands.

Set pushbuttons on sets with OMNIMAT automatic selector.

Check electrical equipment of vehicle.

When checking the function of the tape recorder part in case of cassette car radios see to it that an inserted cassette is ejected after switching off the cassette car radio.

### MOUNTING THE SPECIAL ACCESSORY

(Part no. see components list)

Extension speaker for Mono car radios:

Mount the extension speaker into the rear deck and connect it with the corresponding cable set.

Extension speaker for Stereo car radio:  
Stereo system with 3 speakers:

Mount the extension speaker at the RH and LH side into rear deck and connect them with corresponding cable set.

Stereo system with 4 speakers:

Mount the extension speakers into the two front doors and connect them with the corresponding cable set.

### SPEAKER CONNECTION

Connect speaker according to connecting scheme delivered in the cable set.

### HANDING OVER SET

Explain operation of set to customer, i.e. setting of pushbuttons, use of tone control and sensitivity switch.

Complete guarantee forms and hand over to customer all papers relevant to set.
